

Mobile Data Collection

100% Return On Investment in less than 1 year

CAMA systems are a great tool in the office, but lose their efficiency in the field. MobileAssessorSM is the first of its kind to optimize the field appraiser's workflow based upon what's important to their project at hand. Easily review property data, market value estimates, or set flags with just the touch of a finger. If more information is needed or if edits are required...simply swipe your finger and gain access to a full Parcel Menu.

Real Time Quality Control

Instant data review from the office.

Data that is collected from the field can be instantaneously reviewed for quality control from the office. Changes made by the field appraiser are highlighted. This allows for an easy and intuitive review of the property.

Dynamic RouteSM

Save on fuel costs.

Save on time, increase your productivity, and reduce your expenses while never manually routing or collating field visits again.

Touch Screen Sketching

Quick sketching in minutes.

This sketch tool is simple and easy for the field appraiser to use, with shortcuts and tools focused on speed and efficiency.

Interactive GIS and GPS

Visualize your work.

Our Interactive GIS maps with GPS location show the subject property and the user's location for easy navigation while in the field.

Instant PhotobaseSM

High Quality Field Images.

Our Instant PhotoBaseSM provides automatic photo uploads, synchronization and image association to the parcel record in real time. There is no manual association of photos needed. Leave the digital camera at the office!

Disto Integrated Sketching

Another tool for accuracy and efficiency.

We've integrated with the Leica Disto tool for more sketching options. Take a picture of a building and the measurements will be displayed in Mobile Assessor! Utilize Disto's 3-point measuring tool for easy measurements of large commercial structures, and more!
